APR

THE PHIL-ARM MOBILE RADIO CLUB

MEETING - Cassidy School, East entrance between 60th & 65th on Lansdowne, West Philly, Date 1, 1952 at 8:00 PM.

NET CONTROL - First car to arrive.

SPEAKERS - 3VVS, QOH, 3NUP will talk on the various commercial mobile ham rigs presently on the market. Rigs to be discussed will be Stancor, Subraco, Iyeco. Lets all turn out and give the meeting a boost.

REFRESHMENTS AND DOOR PRIZES

VISITORS TO THE LAST MEETING - Too many to list here. Last months meeting was a dandy with Chas. Vance W2QO doing the honors with a TV demonstration. Many thanks to you all for a nice turnout and many more to Charlie for the nice program.

AGENDA FOR MAY - A talk by BOON on noise limiters. We may squeeze in some CD movies somewhere.

NEW MEMBERS - All new members will be duly recognized at the meetings. We don't have room in this rag to do justice to all the new members but will endeavor to list them as soon as an accurate list is compiled. We are in the process of reorganizing this dept. - have had many legitimate criticisms of our present methods - rest assured they are being corrected.

THE WORD - Mort Isenberg reports Mr. Rapp wants to plug CD and asks our help in a VFW Parade Sat. April 26 2:00 PM in Philly from 21st and Parkway to City Hall. The new city comm. truck will be displayed. Our operations not yet determined - probably a show of strength rather than functional. More details later. Mid month committee meeting are now scheduled as more or less a permanent fixture to organize activities, handle detail and spread blarney that is cumbersome at the regular meeting. Any Club Member is invited to participate-we can guarantee you will be given a job. At first meeting QFY & KCG depleted PXI's refreshments. PXI didn't have the capacity to return the compliment at QFY's. Next meeting at QGR's to be announced. As you know W3CLM provides our calling frequency (channel 1) 29493.2 with a 24 hour monitor. More appreciation than we can show is due the boys. Their continuous monitor of our freq. is the biggest single factor in the upswing of club interest. Their latest adjunct is a 100 watt. 100% readability is evident in almost all of the city compared to only select locations previously. 15 mile radius is solid in several locations. 3IM is still reporting 80 to 100 mile car to car with little effort. We have added an aeronautical mobile to our roster- 3KCG can fly as well as eat. The lil squawky talky with 0.6 watt is the gear and in case you don't think that gets out from 3000 ft. up just listen in on the CD drill West Chester, Mar. 30, 3:00PM. All mobiles with Channel (1) rocks are invited to participate. Channel (2) 29526 will also be in use for relay. Please respect these frequencies and help N.C. W3RQZ maintain control. All cars with assignments are to be in position by 2:30 PM, all others call in for assignment at that time. Some locations are difficult and cars must double up. Remember we have a large area and at least 12 cities to cover. You know of course there is a meeting after the regular monthly meeting at 3IM's where you learn of the latest in electronic technique- Last meeting lecture was "How to dip a 100th push pull final by dimming the brightest plate to a dull red". This latest type final had one tube going for the ride - saves juice. Next meetings topic at IM's "How to load a gallon into a good grade garden hose antenna - random length - no nozzle. This ain't all Jay! 3EM's Crosley pulled up to City Line & Haverford stop lite. On the jet take off the Master Mobile counter weight hanging over the stern raised the bow wheels off the ground. Several people sat on the radiator cap to get things back on an even keel. Did you hear about the two maggots that were caught making mad love in dead earnest? 3PXI and 3NIP visited Ridley Radio Club a while back - the club sure has a fine spot at "Penn's" QTH in the second story of his garage. They had 25 hams present-and meet every other week- rite fine deal fellers (and gals - Hi). We met 3JB there-he suggests a distributor filter to suppress noise-check Bill for details and results-seems the Army used a gadget similar to Bill's. 3VVS reports no TVI in his own receiver (the acid test these days) with 30 watt rig at his new QTH at Ardsley, Pa. Paul's master mobile antenna is packin a sock with no reactance into the final. This rag still claims there is a top loading effect with the can in the middle. In case you don't believe it line two cars up side by side some time for a check. Someone ought to try a top loader on ten foot kicks. Betcha it works! 3QFY has a deluxe operating position and bench courtesy of Spencer surprises. 3KCG is temporarily off the air - he's rebuilding to FCC specs- Hot Dog! 3LJ - ex KR6FO is now active on 10-VFO- and expects to be mobile shortly. 3EXY was heard with a new rig. 3NKN is prospecting. That ole rascal "Ernie" 3DSG is president of West Philly Club, Cassidy School. 1. Swell gang - they meet every other week, refreshments, movies, etc. - we want to plug their weekly code classes. This is an important service that Phil-Mont is not able to perform. A fine help to hopefuls - contact 3JAG or 3GKN for details. Field day is coming up - would be nice to make a showing with our putt-putts and lots of available gear - how about it fellas is there any time left in our lives to do this? We need more cars and rigs and need more help - more to plug it all over. We need more cars and rigs and need more help - more to plug it all over. We need more cars and rigs and need more help - more to plug it all over. and printing sources. Talk is for a new ditto machine- who has one that can be chizeled, stolen, or purchased (if we have to). It is the only limit on the size of this rag. BC-603 FM receiver 20.0 to 27.9 mc for sale - 10 preset channels \$15 - Howard Hossman. 110 ac 600 watt MG set-Briggs and Stratton-like new-best offer-Dick-Gladstone 5-8700. Gonset 10-11 \$26. Two fellers report need of mobile rigs - who has em to dump. This rag is trading post for mobile rigs. We always have more buyers than sellers it seems. Wanted: innards of a mine detector -PXI

W3PXY
